

Homemade Hand Sanitizer Recipe¹

To make homemade hand sanitizer you will need:

2 parts of 99% rubbing alcohol (isopropyl alcohol) to one-part plain aloe vera gel.

Combine these two ingredients well and pour into a properly cleaned liquid soap, hand sanitizer, or lotion bottle.

Do not use rubbing alcohol with a lower percentage of alcohol.

The final formulation needs to contain 60% alcohol which can be best achieved by using 2 parts 99% rubbing alcohol to one-part aloe gel.
