

HOW CHIROPRACTORS CAN HELP PATIENTS

Everyday activities place demands on our spine, muscles, joints and nervous system - also known as the neuromusculoskeletal (nMSK) system.

CHIROPRACTORS ARE SPINE, MUSCLE AND JOINT EXPERTS

nMSK conditions cost Ontario **more than \$2 billion annually** in absenteeism, medical expenditures and related disability payments.

Chiropractors use evidence-based, clinical expertise to diagnose issues that affect your body's movements, providing hands-on, non-invasive treatment without medication or surgery.

3.5 MILLION ONTARIANS

rely on their Ontario chiropractors annually.

Chiropractors have close to 700 affiliations in primary and secondary care in Ontario.

Chiropractic education includes four years of post-graduate training, totalling 4,500+ hours covering foundational sciences, clinical education, and research.
